#### takeMS BD1024TEC850

### **Description**

These Memory devices are JEDEC standard registered DIMM modules, based on CMOS DDR SDRAM technology.

These devices consist of CMOS DDR SDRAMs in TSOP or FBGA packages on a 184-pin glass epoxy substrate. The memory array is designed with Double Data Rate (DDR) Synchronous DRAMs for server applications.

The pipelined, multibanked architecture of DDR SDRAMs allows for concurrent operation, thereby providing high, effective bandwidth. Decoupling capacitors are mounted on the PCB board in parallel for each DDR SDRAM, which provides proper voltage supply impedance over the whole frequency range of operations, in accordance with JEDEC specifications. These modules feature Serial Presence Detect (SPD) based on a serial EEPROM device.

Features	
184-pin registered DDR SDRAM	
JEDEC Standard 184pin DIMM 2.5V +/- 0.2V VDD & VDDQ Power supply	
Auto Refresh (CBR) and Self Refresh Mode	
Programmable Burst Length	
Fully differential clock operations	
Serial Presence Detect (SPD) with EEPROM	
Module layout is based on JEDEC standard routing guidelines	
Impedance controlled 6-layer PCB Technology	
JEDEC standard form factor	
Internal four bank operations	
single pulsed data for write RAS	
Operating Temperature 0°C ~ 75°C	

## Technical Datasheet

### **Technical details**

- 1024 MB longdimm module
- 128Mx4 IC organisation
- x72 module organisation
- 333MHz / PC 2700
- double sided / 16 ICs (+ECC and register)
- CAS Latency 2,5 at max. memclock
